

TrackDown

resolving 404 errors at PoliTo

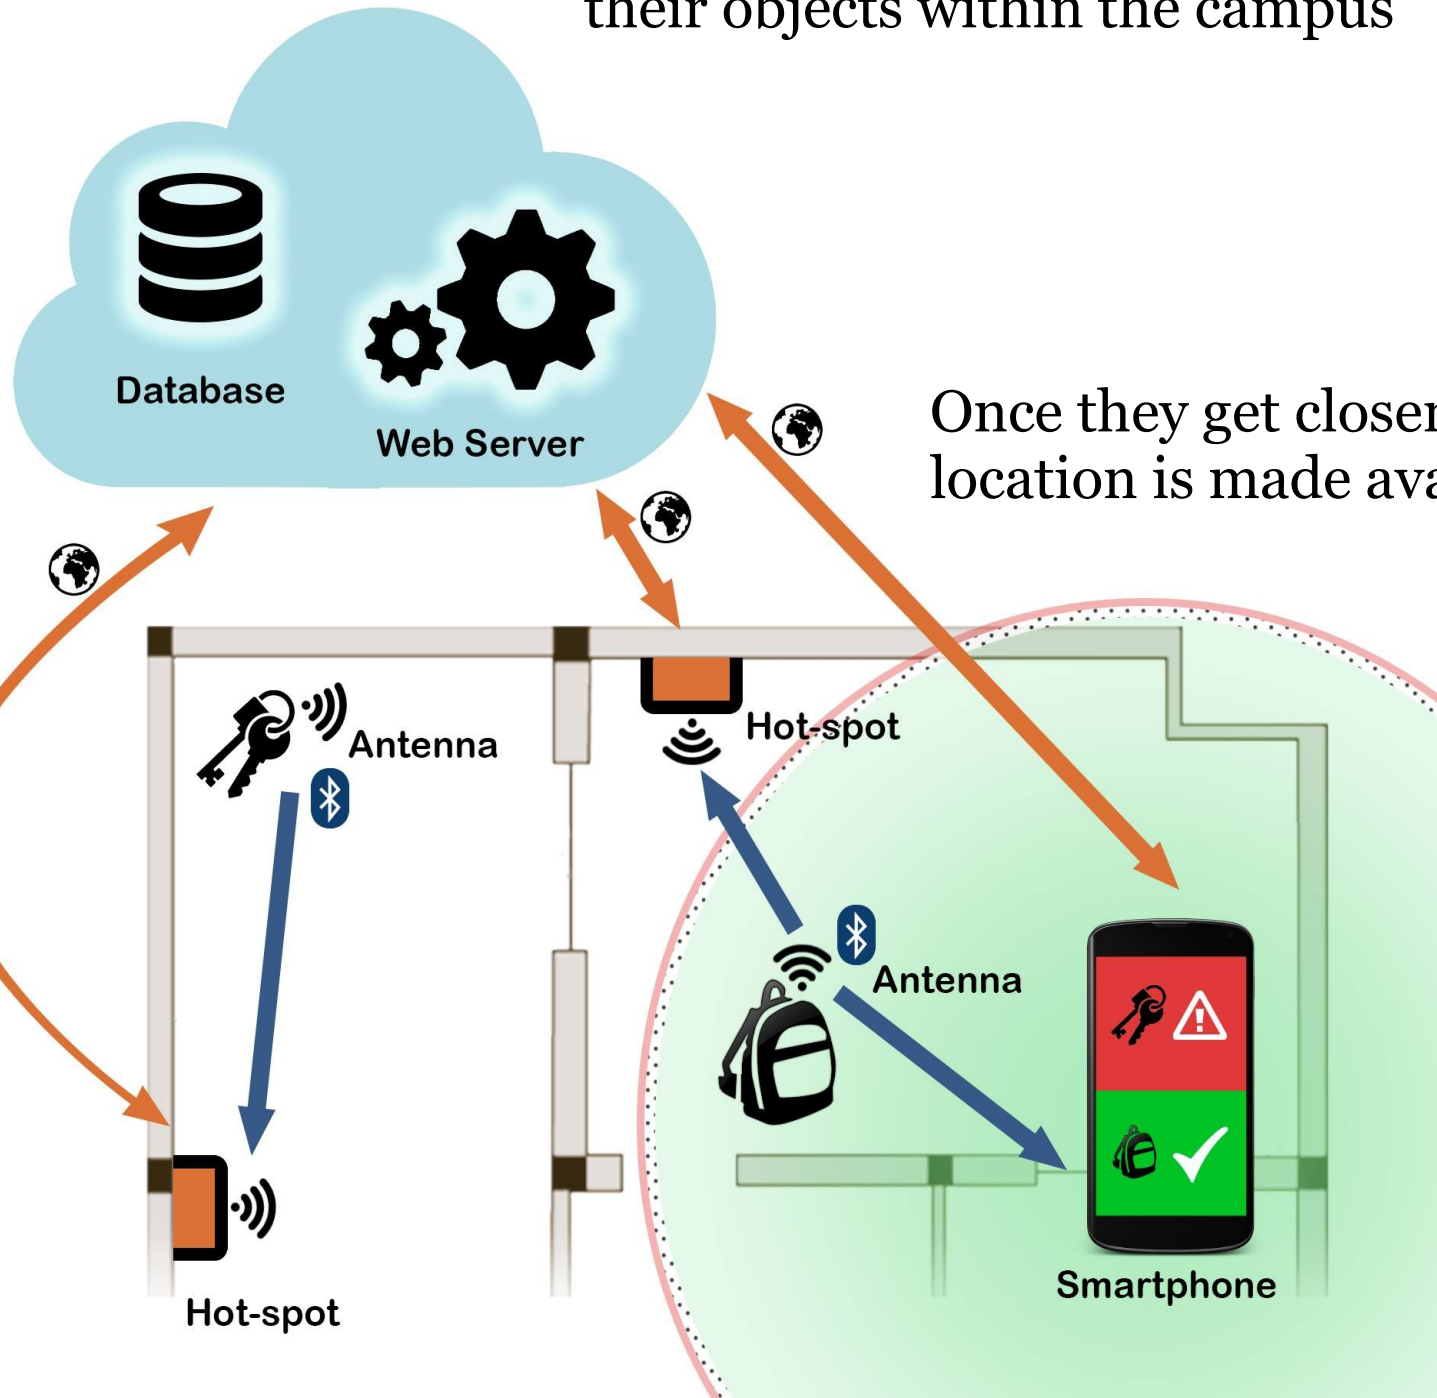

We are working on a system that allows its users to receive detailed information about their lost belongings' whereabouts

The users can retrieve a coarse location of their objects within the campus

The users can retrieve a coarse location of their objects within the campus

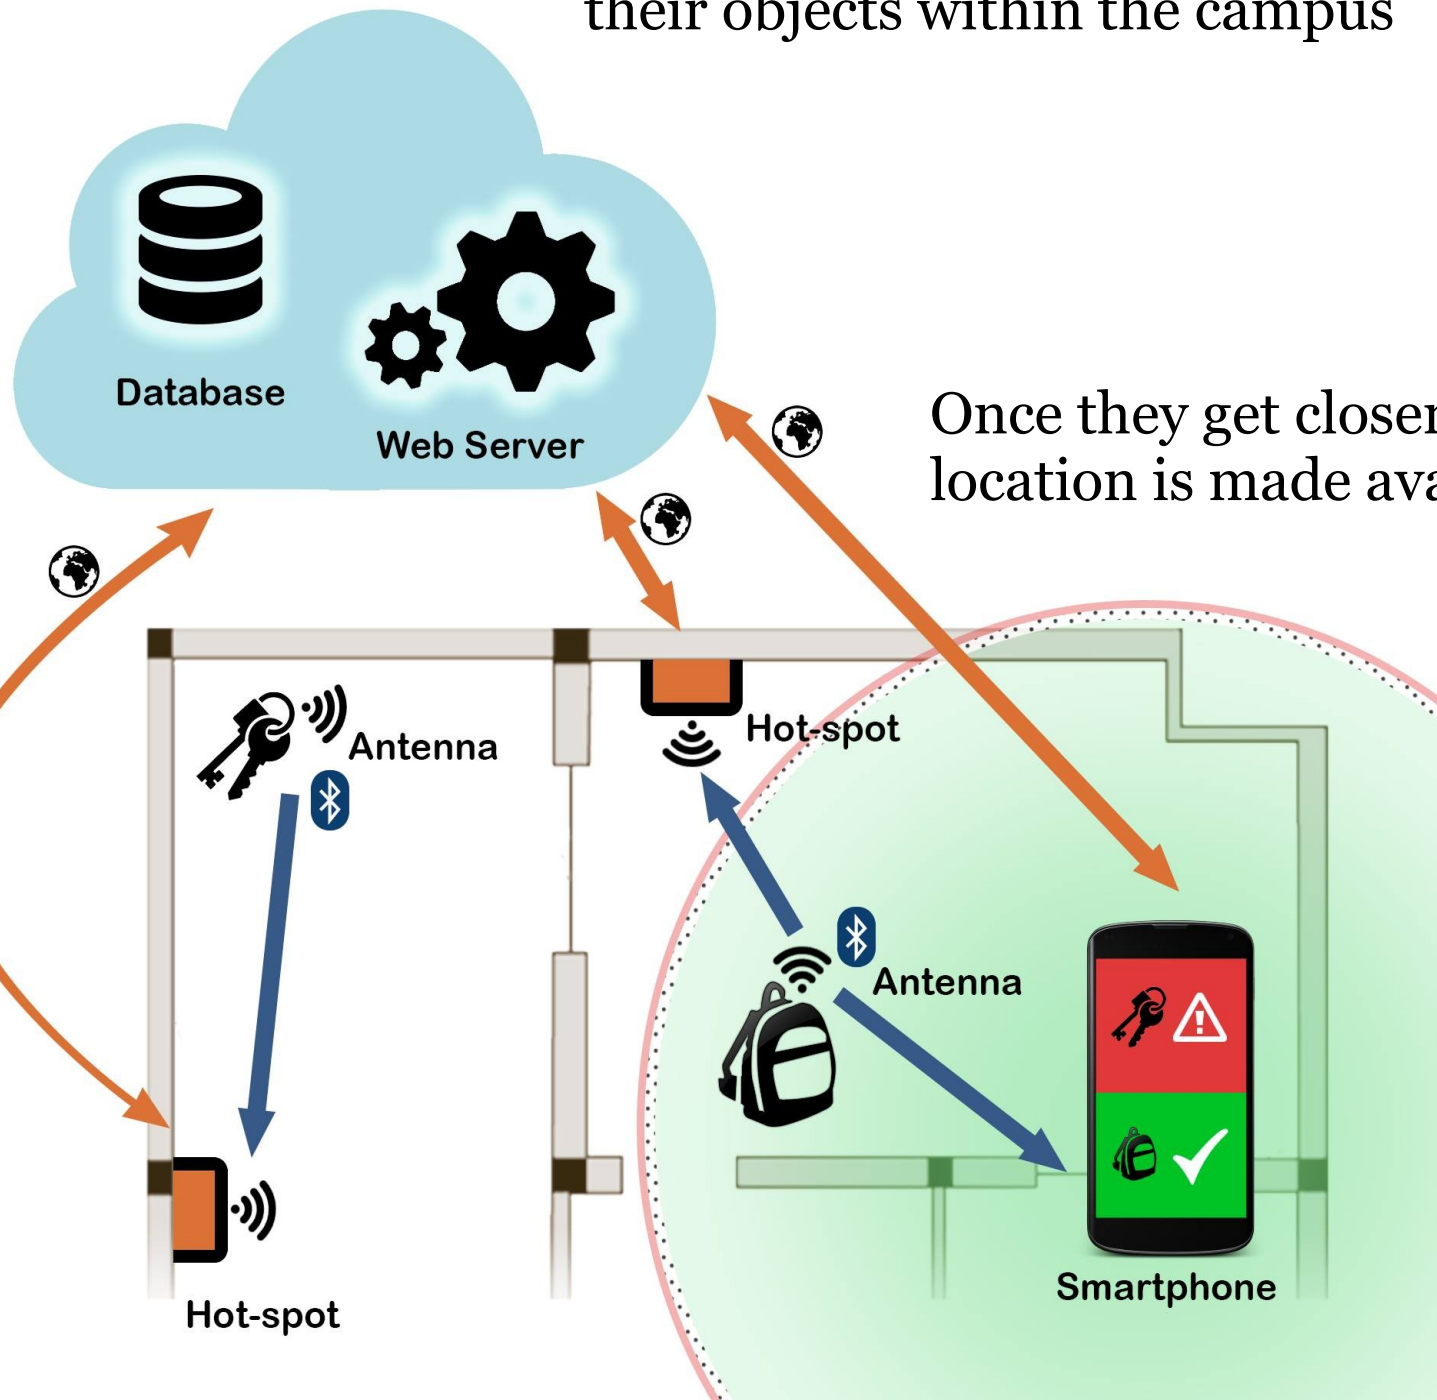

Once they get closer, a more detailed location is made available

The users can retrieve a coarse location of their objects within the campus

Once they get closer, a more detailed location is made available

Or, they can avoid chasing after their items in the first place by receiving a notification every time they are about to forget something behind

Current status

iBeacons can be detected using a Bluetooth dongle (that was pretty crucial)

The database is up and running

The RESTful API is being developed
